Dear Rose.

Thanks for the update. I like to offer the technology where mining companies can avoid that such accidents happen. Do you have and contact details for me? I would love to propose a good and not even expensive technology to them. I also believe that your Government organization shall know about that.

Best Regards / مع خالص التحية // Salamat / Mit freundlichen Grüßen

EPA is committed to working closely with response agencies and state and local officials to ensure the safety of citizens, respond to concerns and to evaluate impact to water contaminated by the Gold King Mine Release. EPA is sharing information as quickly as possible with the public as experts work to evaluate any effects the spill may have on drinking water, public health, agriculture, fish and wildlife.

Please see our website for the latest information: <http://www2.epa.gov/region8/gold-king-mine-release-emergency-response>

Regular updates will be posted as they are available.

Subject: Spill of Mining Waste Water in Colorado

Dear EPA Team.

I did read the Zoe Schlanger article about the spill of mining Waste Water in the Internet. I did also see the alarming pictures. The report is even shown here in Germany. The reason I contact you is to show you a new and innovative technology where heavy contaminated water can be treated by using the Photo Catalytic process. The attached document will inform you a bit more in detail about the technology.

Please note that the unit as installed and operation in Germany is processing water from a rocket test facility unit. The Waste Water from that unit is so contaminated that it falls under extreme hazardous waste. After the treatment is clean and fulfill the requirements for the pre stage of drinking water.

I would be more than happy to support you in your work and would be more than happy to introduce the technology to the US Market / Companies. The value of water is higher than the value of Gold. The message I would give the mining company is, that they can protect the environment and future life of human and animal with a relatively low investment.

I hope to hear from you soonest.
